500W Lead-Acid(Pb-Acid) Battery Charger

Features Overview

- 1. The charger integrates power factor correction (PFC), it can avoid the impact of high current and can't produce pollution on the grid
- 2. The charger is designed with a wide input voltage range from 90-265 VAC making it an ideal choice for any worldwide application
- 3. Efficiency > 87%, Power Factor > 0.97
- 4. With MCU controller, CC+CV(H)+CV(L) 3-stages charge method
- 5. Designed for 24V~72V Pb-Acid battery Protection

- 1. The charger's internal relay makes the output voltage is less than 5.5V with no-load, when the output is connected to a battery, the output voltage of charger is normal
- 2. Short circuit protection: when the output of charger is shorted, the charger will close output automatically without any damage
- 3. Reverse polarity protection: when the output is connected to a battery reversely, the charger will close output automatically without any damage
- 4. Overheating protection: the internal temperature exceeds 80 °C, the charger will close output automatically
